**Faster and more convenient scaling**

**Optimized piping structure**

New aerodynamic design  
Reduce fluid pressure loss  
Effectively remove plaque and pigment

Before scaling

Plaque disclosing

After scaling

**Classic sodium bicarbonate powder**

Average particle size:  
about 65 microns; hardness is less than that of enamel, doing no harm to teeth  
Contain natural plant-derived essence for a more pleasant taste  
The powder is waterproof to prevent the device from being blocked by wet powder

Teeth	Moh's hardness
Enamel	4-5
Dentin	2-2.5
Cementum	2-4

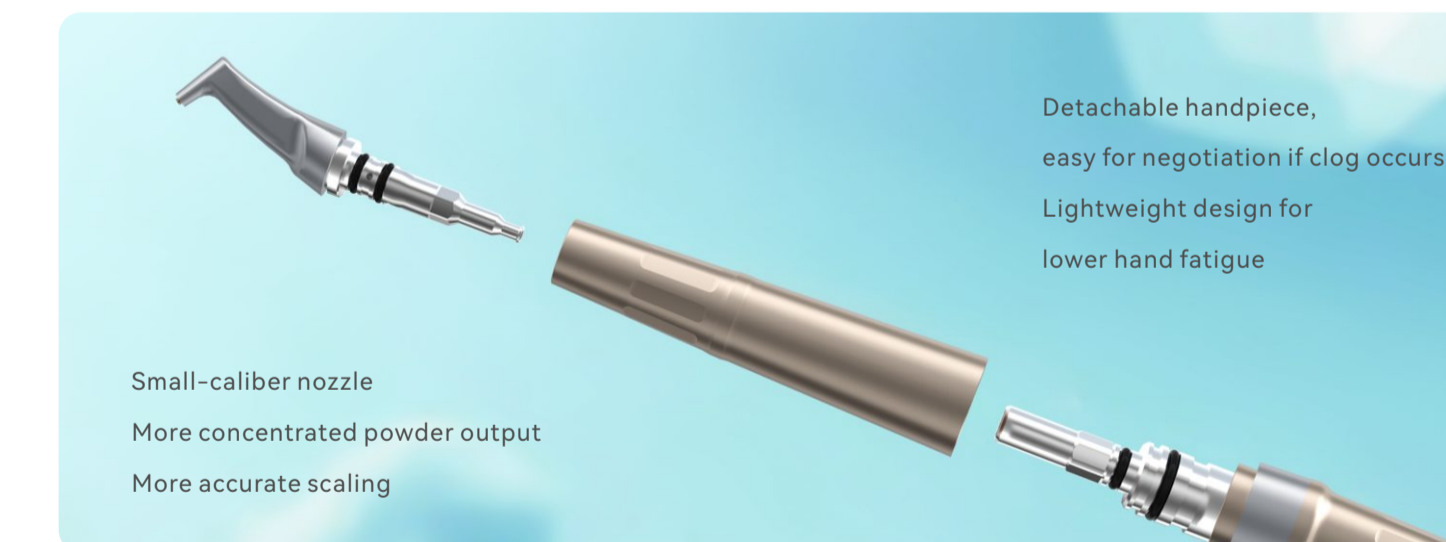

Powder	Moh's hardness
Sodium bicarbonate	2.5
Glycine	2
Calcium carbonate	3
Aluminum hydroxide	3

**Two-in-one: Supragingival & subgingival mode**

**Three-section handpiece design**

Small-caliber nozzle  
More concentrated powder output  
More accurate scaling

Detachable handpiece, easy for negotiation if clog occurs  
Lightweight design for lower hand fatigue

Subgingival nozzle made of medical polymers  
360° rotatable  
Bendable

Three-direction powder output  
One-direction water output  
Thorough plaque removal  
Great accessibility

**Ergonomic design**

**Fully transparent funnel-shaped powder tank**

Stable powder output  
360° rotatable, allowing real-time observation of powder flow in the tank

**Compact and lightweight**

The main unit weighs only 2kg  
Space-saving base design
